WHITEPAPER

AMAZON Token SWAP

The year 2020 and 2021 were difficult years for all of humanity, we entered a pandemic and every time we imagine leaving, another outbreak comes and surprises us again. The world economy felt at that time the fear of a major recession, as entire countries had to close their borders to prevent the COVID-19 virus from spreading throughout the country and taking new victims.

This fear of recession made entire markets mobilize, as the fear of hyperinflation returned to haunt the world. That's when cryptocurrencies were seen as a solution to the current economic model, so in every country people started to see cryptocurrencies as a new source of income and wealth, making the market capitalization of Bitcoin and the crypto market all hit a new ATH, including Bitcoin surpassing Silver's market capitalization.

The year 2021 was also the year that reminded us of the importance of caring for the climate, as we saw the effects of climate change manifest as devastating rains that swept many European countries and heat waves that killed many people in North America. COP26 was very emphatic in saying that we urgently need to take an active stance on the issue of preserving the planet and avoiding releasing more greenhouse gases. Also, at COP26, the importance of large biomes for biodiversity and the protection of the planet's climate balance was remembered. Large forest regions are extremely important to maintain a thermal and life balance, with the Amazon region in South America being one of the main biomes that must be preserved in the world, as they hold a large part of the world's biodiversity, be it flora or fauna.

Why AmazonSwap?

It is with this in mind that the AmazonSwap initiative emerged, an organization formed by blockchain enthusiasts who have long been committed and engaged in actions to preserve the quality of life on Earth.

In this document, you are being invited to learn about AmazonSwap's proposal and its solution to help preserve our most important asset, Amazon.
We know it is an ambitious project, which is a very challenging goal, after all, Amazon is present in 8 countries and it is not the most accessible environment in the world. But we understand that with the creation and union of an engaged and strong community, we can mobilize many people around the world.

We chose to do this through a blockchain project, as the great visibility that cryptocurrencies have had in recent years makes our cause more easily noticed, and our main objective is to make this visible and we also know that we need resources for that, that's why our project aims to create some blockchain products to be marketed and, through a small commission, we will use them to perform the necessary actions to make the project viable.

AmazonSwap

When the team conceived this project, we were in the middle of 2019 and we saw how much of the Amazon was being destroyed for commercial purposes, so since then, we started to study solutions that we could implement to try to contribute to resolving this situation.

We thought of several business models, among which what stood out the most was the acquisition of areas that are currently used for mining and agriculture and turning them into forests again. Another initiative is to reimburse the owners for their extractive activities so that it is no longer viable for them to do this type of commercial activity and so they prefer to keep the forest preserved.

To achieve this, it is understood that the amount of resources is large, so we sought to integrate to the team, computer professionals who were experts in blockchain and smart contracts, from this partnership came the idea of creating a DEX (Decentralized Exchange) that would call AmazonSwap. AmazonSwap's main objective is to generate liquidity for trading pairs, in addition, AmazonSwap will provide in the future the

possibility to carry out staking and thus become a passive income instrument for those who want to earn income in the medium and long term.

AmazonSwap will be a decentralized exchange, initially based on the Binance Smart Chain network, as this is one of the networks with good transaction speed and affordable fees, in addition to being one of the largest blockchain networks on the market. In the future, we want it to work on other networks, such as Solana and Polygon, as these networks have good scalability conditions.

To achieve the objective that motivated the creation of this project, to help preserve the Amazon, we intend to revert a large part of the fees charged in DEX AmazonSwap, in a fund that will be used to make actions to preserve the Amazon rainforest feasible.

Amazon Token

This project will go through several phases, the first of which has already been carried out, the creation of the AmazonSwap organization, which, as explained above, will be a DEX that will have the functions of creating liquidity pairs, selling tokens, and will also provide the possibility of creation of a staking platform.

For all this to work, it will be based on our token, the Amazon Token, which will follow the structure of a DAO token, that is, it will serve for the community to vote on important decisions, it will also be used to generate liquidity in trading pairs, used in staking platform and as a bargaining chip in other blockchain products that we will be providing.

For the token to meet the project's needs, it will have a transaction fee of 10%, 2% for providing liquidity, keeping the token self-sustainable in the medium and long term, and 8% for the Amazon portfolio, this portfolio will be used in the first weeks after the launch for investment in marketing, precisely to make the project better known and raise awareness, after this period, 60% of the 8% will be used to compose the Amazon fund, which will be used to enable the project to preserve the Amazon. The other 40% will be used for marketing and project maintenance.

Below we will provide some basic information on how the token will be structured.

Tokenomics

BLOCKCHAIN: Binance Smart Chain (BEP-20)
SYMBOL: TechTREE
Slippage: 10% to 16%
Contract address: TBA
Decimals: 18
TOTAL SUPPLY: 1,000,000,000 (1 BILLION)

Pre-sale and Launch Details

PRESALE + LIQUIDITY: 194,200,000 (19.42%)
PRIVATE SALE: 55,800,000 (5.58%)
TEAM: 40,000,000 (4%) - locked for 6 months
AIRDROPS: 10,000,000 (1%)
ECOSYSTEM (staking + exchange reserve + MetAmazon reserve):
400,000,000 (40%)
BURN: 300,000,000 (30%)
TOTAL SUPPLY: 1,000,000,000 (100%)

Amazon Lottery: LuckTREE

To make the project self-sustaining, we aim to create blockchain products that can be marketed and raise funds that can pay the costs of our initiative. So, as the first product that will make use of Amazon Token, we created the LuckTREE, a lottery platform where participants will use Amazon Token to buy lottery tickets and try their luck, all using an intelligent contract, that is, without the help from intermediaries, bringing more transparency to the process.

This initiative is positive, as part of the accumulated value for the draw will go to the winner, and another part will be burned forever, helping to make the token deflationary.

LuckTree, will work to maximize the number of winners but prioritize the highest prize for whoever hits the most numbers.

Each ticket purchased costs x TREE and will have 6 numbers. Each wallet can buy as many tickets as they want.

Initially, we will have 1 draw every 24 hours.

AMAZON SWAP
Token

Winning Criteria

The digits on your Lottery must match in the correct order to win.
The numbers will start from left to right, and to win the numbers you must match them all without interruption.

Here's an example LuckTree draw, with two tickets, A and B.

Ticket A: The first 3 digits and the last 2 digits match, but the 4th digit is wrong, so this ticket only wins a "Match first 3" prize.

Ticket B: Even though the last 5 digits match, the first digit is wrong, so this ticket doesn't win a prize.

Prize brackets don't 'stack': if you match the first 3 digits in order, you'll only win prizes from the 'Match 3' bracket, and not from 'Match 1' and 'Match 2'.

Destination of bets.

DIGITS MATCHED	PRIZE POOL ALLOCATION
Matches first 1	2%
Matches first 2	3%
Matches first 3	5%
Matches first 4	10%
Matches first 5	20%
Matches all 6	40%

Referral System	10%
Fund for upcoming draws	5%
AmazonSwap Maintenance	5%

Amazon NFT

Those who follow the market today have already noticed that NFT is the new trend and the technology of the future that is already in the present, as this solution can serve the most varied purposes, from eternalizing a work of art to performing a marriage registration.

As we want to take advantage of this unique moment, we will also have an NFT marketplace so that our users can trade their collections within our platform.

In addition, we will be launching exclusive collections with themes based on Amazonian species, this initiative aims to make people aware of what is happening in this biome, so NFTs will have the theme of species that are unique in the Amazon rainforest, having more affordable items and some more expensive, based on their rarity. The most expensive NFTs will be those on the endangered specimen list.

Like the AmazonSwap platform, NFT trading fees will revert to the Amazon Fund for Endangered Species Preservation.
As the goal is to make Amazon Token useful, to acquire NFTs on our platform users will be able to pay in BUSD or USDT, but for those who pay using our token, they will receive a discount on the purchase, this is another initiative for use and increase the search for the token.

Amazon Launchpad: GreenPad

What is GreenPad?

GreenPad is a decentralized launchpad that allows users to launch their own token and create their own initial token sale. No coding knowledge is required, just simply navigate through to our terminal and design your own token in just a few clicks.
GreenPad offers multiple other features to help you with the overall token launch, such as: Automatic listing of your token on AmazonSwap and

PancakeSwap, all whilst giving you the ability to lock your LP and and adding an optional vesting period for your tokens.

The goal of GreenPad is to offer a decentralized Launchpad allowing everyone to create their own project, and to launch it on the mainet, without any particular computer knowledge.

Why you need to choose GreenPad?

GreenPad is the result of taking the best elements of each Launchpad from different projects and combining them into one.

A decentralized and easy to use platform:

A token creation section, where you can create tokens with the desired parameters an AirDrop section to allow projects to AirDrop their private sale if they wish.
A system of token locking and liquidity to ensure transparency of the use of tokenomics to investors

A KYC and audit system will be available and performed if you wish by one of our partners. The projects that will be audited and KYC will be highlighted on our platform.

Trending launch pool list

Benefits of GreenPad:

Help the planet through your project, part of the fees generated by GreenPad will be used to reforest forests across different countries. Nature is our country, let's preserve it as much as possible. Ecology is an increasingly important cause, by using AmazonSwap and GreenPad, you give an ecological dimension to your project.

Attractive prices allowing small projects to launch, even with little money

We offer our Launchpad users the opportunity to create a staking pool on AmazonSwap with a 50% discount. We will also offer the referral system for projects that want it.

We will offer marketing support to projects through the GreenPad. Through our knowledge but also those of our partners.

In order to support the creators, our eco-system will invest in some projects that have caught our attention.

Amazon Referral System

The AmazonSwap referral system exists to make the platform and every token that is released on it go viral. Here we reward those influencers who want to work together with us to make this project known.

In our referral system, each user can generate a personal link and share it on their networks and whenever someone makes a transaction using your referral link, the link owner will receive part of the commission that goes to DEX.

Amazon Game (MetAmazon)

The Play-to-Earn Games market is undoubtedly a phenomenon, games like Axie Infinity made this market popular and very profitable, because of that, we have in our plans the creation of a strategy game in the P2E mode, is that will reward players for playing the game.

The game will explore the theme of Amazonian folklore, teaching the culture of the people who live there, the idea is that the player explores the forest environments and uses characters like native peoples, and mysterious and legendary characters, the game will have mechanics similar to RPG games and at each level that the player explores, the items he cultivates will gain more value. All items used in the game will be NFTs that can be traded on our platform.
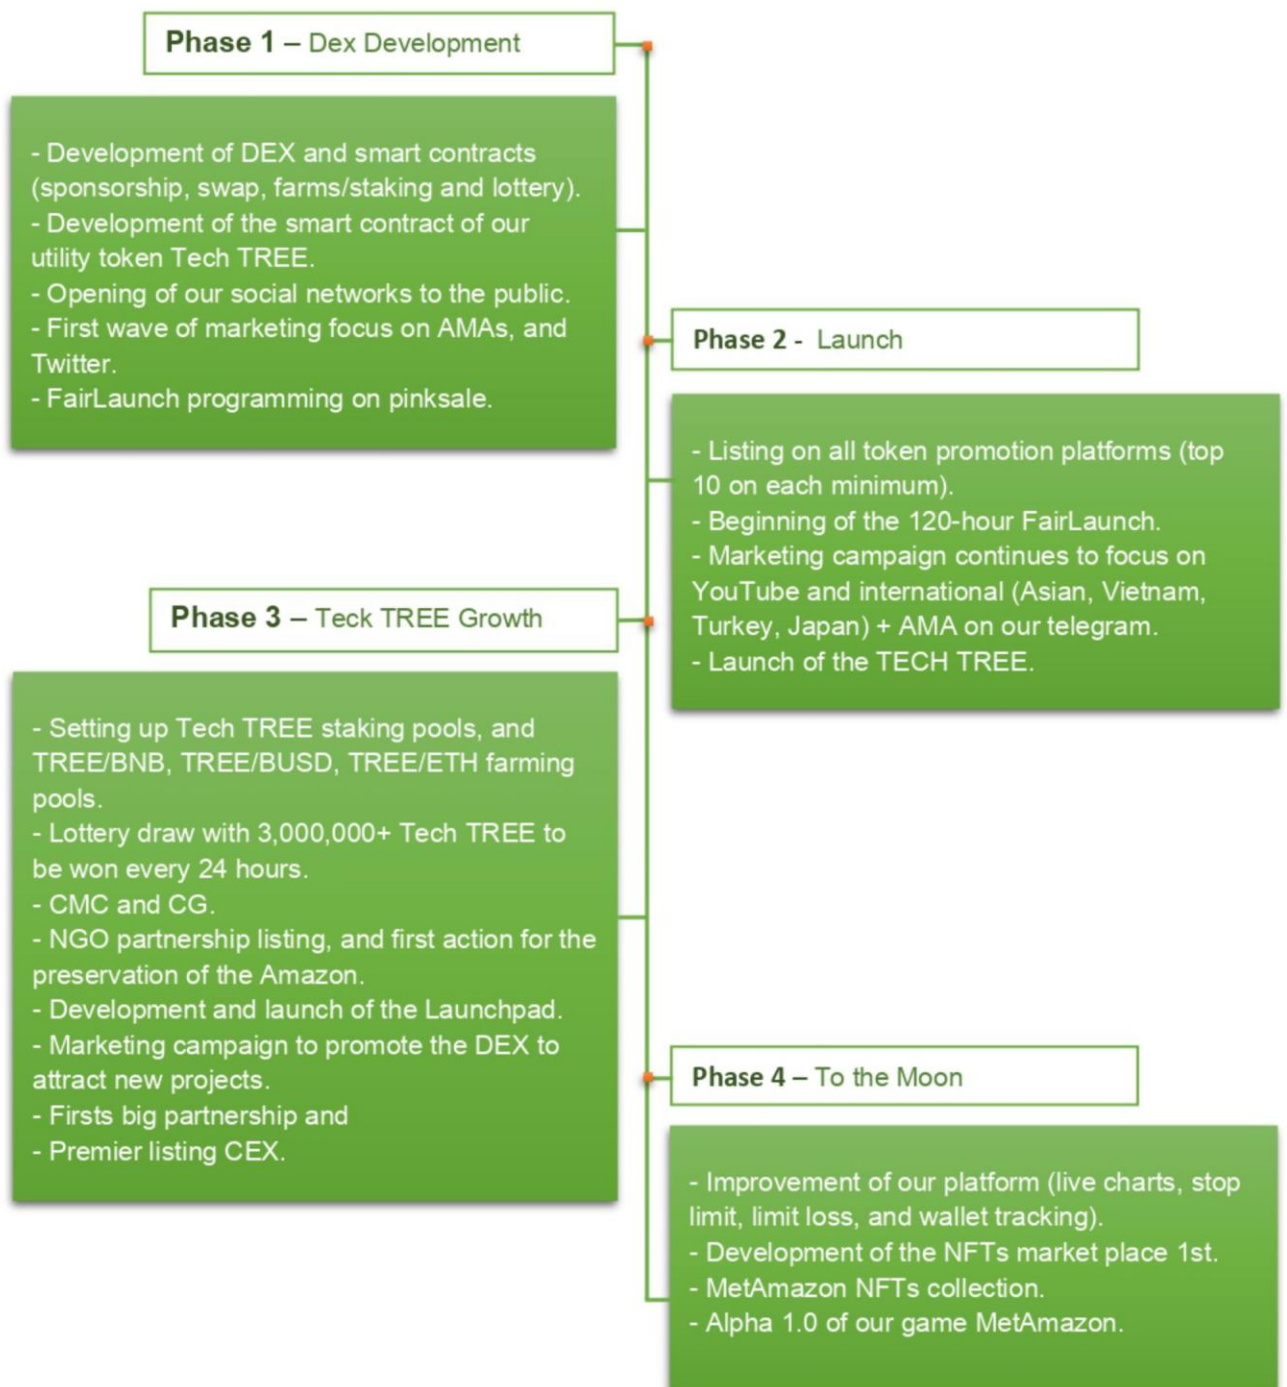

To start playing, it will be free and the player can even be rewarded with tokens that can be sold, but as he dives into the game, he may need to acquire items or stronger characters to pass the level.
Details of the game will be released shortly as it approaches release.

Roadmap

We made our roadmap based on the capitalization phases that we are reaching; we chose this strategy because we are realistic with the environment we will encounter and the financial needs that each phase requires. We don't want to promise anything that we won't deliver and as this project is a DAO, we want the participation of every member of the community, so this roadmap is organized in the checkpoint structure, that

is, every time we reach a capitalization and funding goal, a new level is unlocked and we'll move on to it. See below for details of what lies ahead.

Phase 1 – Dex Development

- Development of DEX and smart contracts (sponsorship, swap, farms/staking and lottery).
- Development of the smart contract of our utility token Tech TREE.
- Opening of our social networks to the public.
- First wave of marketing focus on AMAs, and Twitter.
- FairLaunch programming on pinksale.

Phase 2 - Launch

- Listing on all token promotion platforms (top 10 on each minimum).
- Beginning of the 120-hour FairLaunch.
- Marketing campaign continues to focus on YouTube and international (Asian, Vietnam, Turkey, Japan) + AMA on our telegram.
- Launch of the TECH TREE.

Phase 3 – Teck TREE Growth

- Setting up Tech TREE staking pools, and TREE/BNB, TREE/BUSD, TREE/ETH farming pools.
- Lottery draw with 3,000,000+ Tech TREE to be won every 24 hours.
- CMC and CG.
- NGO partnership listing, and first action for the preservation of the Amazon.
- Development and launch of the Launchpad.
- Marketing campaign to promote the DEX to attract new projects.
- Firsts big partnership and
- Premier listing CEX.

Phase 4 – To the Moon

- Improvement of our platform (live charts, stop limit, limit loss, and wallet tracking).
- Development of the NFTs market place 1st.
- MetAmazon NFTs collection.
- Alpha 1.0 of our game MetAmazon.

AMAZON Token SWAP

Team

As already mentioned, we are in love with our planet, we understand that there is only one Earth within our reach at this time, so we don't have plan B, we have to take care of what we have, preserving is much better than looking for another Earth to live on. With this dream in sight, we got together to create AmazonSwap, our team is made up of professionals from different areas and some nationalities. We are writers, programmers, journalists, designers, project managers, in short, our team, in addition to being competent, is composed of people who are committed and have a love for the cause and we want to invite you to come with us on this journey.
